PROFESSIONAL SUMMARY

Cybersecurity Analyst with hands-on experience in SOC operations, SIEM platforms (Splunk, Wazuh, Elastic Stack), and incident response. Skilled in threat detection, security automation, and vulnerability research with 50+ validated bug bounty findings. Proficient in MITRE ATT&CK framework, malware analysis, and detection engineering across Windows and Linux environments.

TECHNICAL SKILLS

SOC and Monitoring: Splunk Enterprise, Wazuh, Elastic Stack, Incident Response, Alert Triage, Log Correlation, Malware Triage, Threat Hunting

Endpoint Security: EDR, File Integrity Monitoring, Windows Event Logs, Ransomware Detection, Host-based IDS

Security Frameworks: MITRE ATT&CK, Cyber Kill Chain, OWASP Top 10.

Vulnerability Research: Web App Pentesting, XSS, SSRF, SSTI, IDOR, SQL Injection, Authentication Bypass

Programming and Automation: Python, Bash, PowerShell, REST APIs, SOC Playbook Development

Network Security: Wireshark, Zeek, TCP/IP, Network Reconnaissance, Packet Analysis

Tools and Platforms: Git, Docker, Redis, MongoDB, FastAPI, Linux (Kali, Ubuntu, CentOS), Windows Server

PROFESSIONAL EXPERIENCE

SOC Analyst Intern

August 2025 – February 2026

CyArt Security

Remote

- Monitored and investigated 500+ daily security alerts using Wazuh and Splunk Enterprise; tuned detection rules to reduce false positive rate by 30% and improve overall alert fidelity.
- Developed SOC automation playbooks in Python and Bash, improving alert triage efficiency by 40% and reducing Mean Time to Respond (MTTR) for Tier 1 incidents by 25%.
- Conducted log correlation, malware triage, and root cause analysis on Windows and Linux endpoints, mapping findings to MITRE ATT&CK tactics and documenting detailed incident response reports.

Security Researcher – Bug Bounty Hunter

May 2025 – December 2025

Independent Security Research

Remote

- Identified and responsibly disclosed 50+ validated vulnerabilities across web platforms, including XSS, SSRF, SSTI, IDOR, and authentication bypass; collaborated with vendor security teams on coordinated disclosure and patch verification.
- Built custom Python-based security automation tools for reconnaissance, vulnerability scanning, and exploitation testing, reducing manual assessment time by 60%.
- Applied offensive security knowledge to strengthen defensive capabilities by improving SOC detection rules, monitoring coverage, and incident response procedures.

TECHNICAL PROJECTS

Enterprise SOC Platform and Agent Ecosystem | *Python, FastAPI, Redis, MongoDB, MITRE ATT&CK* | 🐙 GitHub

- Architected a security log collection and analysis platform processing 1,000+ events per minute with real-time correlation, File Integrity Monitoring, and Canary File-based ransomware detection, reducing detection time from hours to seconds.
- Integrated MITRE ATT&CK framework for automated threat classification and developed a process attribution engine providing granular endpoint visibility for threat hunting and forensic investigation.

AI-Powered Physical Security and Anomaly Detection System | *React, Node.js, YOLO, Socket.IO* | 🐙 GitHub

- Developed a real-time crowd threat detection system using YOLO object detection for behavioral anomaly identification, crowd density analysis, and proactive security alerting – applicable to physical security monitoring and insider threat detection scenarios.
- Built a Digital Twin visualization engine with Socket.IO for live security event streaming, heatmap-based threat mapping, and automated incident alerts before critical density thresholds are breached.

Multi-Threaded Network Security Scanner | *Python, Scapy, Multi-threading* | GitHub

- Built a high-performance multi-threaded network reconnaissance tool using Scapy for TCP SYN scanning, ARP-based host discovery, and network topology mapping across large network segments.
- Implemented service version detection, banner grabbing, and OS fingerprinting via TTL and TCP/IP stack analysis to support comprehensive network asset inventory and security posture assessment.

ACHIEVEMENTS

- **Hackathon Winner** – SunHacks 2025
- **Bug Bounty Researcher** – Identified and responsibly disclosed 50+ validated security vulnerabilities across multiple web platforms, contributing to improved application security across the industry.

CERTIFICATIONS

- **IBM Cybersecurity Analyst Professional Certificate** – Coursera
- **TATA Cybersecurity Analyst Job Simulation** – Forage
- **Ethical Hacking Training** – Internshala

EDUCATION

Sage University
Bachelor of Science (B.Sc.) in Computer Science – CGPA: 8.0/10.0

Indore, Madhya Pradesh, India
Graduated: May 2025
